

- **REACH Regulation 1907/2006**

HSB-Automation GmbH is a supplier of production equipment, manufacturing linear units, linear tables, and systems for your production. We therefore do not manufacture substances as defined in article 3, paragraph 1 and paragraph 8 of the REACH regulation. Our products are neither intended to release substances as per article 7, paragraph 1, nor do they contain substances as per article 7, paragraph 2 of the REACH Regulation or the Annex XVII dated February 12, 2021.

Our products are therefore not subject to primary registration, notification, or information obligations. Nevertheless, do we meet our responsibilities in enquiring about our supply chain and communicating it with our suppliers and customers. Naturally, we ensure a smooth production process in compliance with the REACH Regulation.

We will monitor the development of substances on the candidate list of January 2021 and will continue to comply with the requirements outlined in article 7, paragraph 2, and article 33 of the REACH Regulation. Based on our current assessment, we do not anticipate any limitations to the functionality or characteristics of our products. Nevertheless, do we reserve the right to adjust our product range to meet the requirements and demands of the market. Should you be affected by such adjustments, we will, of course, inform you in a timely and comprehensive manner.

- **RoHS Directive 2011/65/EU – WEEE Directive 2012/19/EU**

Our products are exclusively manufactured for the use in process and factory automation. Therefore, HSB products are generally integral components of stationary large-scale installations or stationary industrial machinery, which are professionally installed, used, maintained, and dismantled in industrial manufacturing facilities.

Therefore, HSB products do not fall within the scope of the RoHS Directive 2011/65/EU (article 2, paragraph 4), amended by Directive 2015/863/EU, nor within the scope of the WEEE Directive 2012/19/EU (article 2, paragraph 3 and 4). Our suppliers commit to adhere to substance prohibitions and declaration obligations as per RoHS.

Transparency, partnership, and open communication form the basis of our business relationships, ensuring that supplied components meet our requirements. Furthermore, as active supporters of environmental protection and human health, we collaborate closely with our development and production processes, as well as with our reputable suppliers, to ensure that our products continue to comply with RoHS standards.
